

Pallet Planning Checklist

To ensure a steady source of pallets at a competitive price, we recommend you consider these steps now:

Order sooner: Build more generous lead times into your ordering pattern. It's a good practice and can save you money.

Develop proactive pallet plans: Get out your calendar and build a schedule. Don't wait until your supply is low to order more. Keep a steady, regular flow coming.

Consider long-term agreements: Find a reliable supplier to help secure your pallet stock as a hedge against the ongoing lumber shortage.

Optimize your pallet design: If you haven't had your pallet requirements analyzed in a while, you may find you are paying for more lumber than you need to be.

Contact Timber Industries: We can help you with all of the above and more.

Better Ideas. Better Pallets. Better Business.

We supply hardwood, softwood, and presswood pallets, skids and crates to large-scale manufacturers and goods suppliers.

- New stringer and block pallets in customizable configurations
- Custom pallet designs to fit your exact needs, no more or less
